RESULTS OF OPERATIONS

The Fund's net assets decreased by \$2.9 million to \$39.5 million from March 31, 2023 to September 30, 2023. The Fund had net redemptions of \$2.1 million during the period. The portfolio's performance decreased assets by \$0.2 million. The Fund paid distributions totalling \$0.6 million. Series A units returned -1.3% after fees and expenses for the six-month period ended September 30, 2023. Over the same time period, the Fund's benchmark returned 5.2%. The benchmark is the S&P 500 Total Return Index (USD) (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

Inflation declined during the period due to restrictive monetary policy and higher interest rates, as well as an easing of global supply chain pressures. Residential construction activity contracted amid higher mortgage rates, and there have been early signs of weakness within certain pockets of commercial real estate, such as office and retail. Unemployment remained at near-record lows, but there has been upward pressure on wages and increased labour strikes between workers and employers. Inflation and higher interest rates in mortgage, auto and credit card debt has damped consumer spending on discretionary purchases; however, the U.S. consumer remains in a reasonably healthy position.

The Fund underperformed its benchmark for the period. Security selection within the communication services sector detracted from the Fund's performance, as did allocation to the energy sector. Notable individual detractors from the Fund's performance included holdings NextEra Energy Inc. and AT&T Inc. NextEra Energy Inc.'s stock declined along with the rest of the energy sector because of rising interest rates and weakening sentiment on clean energy assets. AT&T Inc. was affected by uncertainty over risks related to lead-sheathing in the company's network, despite underlying operating trends that were in line with estimates. We expect the company to hit its US\$16-billion free cash flow forecast for 2023 and win back investor confidence.

Stock section in the information technology sector contributed to the Fund's performance, as did allocation to the consumer staples sector. Top individual contributors to the Fund's performance included holdings in Broadcom Inc. and UnitedHealth Group Inc. Despite seeing customers reduce demand for its semiconductor solution segment, Broadcom Inc.'s stock outperformed amid strong growth in its artificial intelligence (AI) and generative AI products, with integrations across its different segments. We continue to hold a positive view of Broadcom Inc. as we see the AI business grow and continue to see potential in data center products and expansion in cloud-computing activity and new markets. UnitedHealth Group Inc. outperformed because of membership growth and greater penetration of its value-based care agreements. We continue to hold a favourable view of the company because of its strong client retention, gold standard innovation, rational pricing environment and move towards a more consumer-oriented platform.

We added a new position in Home Depot Inc. because the current cyclical pressures presented an attractive opportunity to own a business that should benefit from the undersupply of housing in the United States and rising household formation. An existing holding in Visa Inc. was increased based on its defensive competitive position, attractive profitability and growth potential in new value-added and payment flow services.

A holding in Ball Corp. was eliminated from the Fund. Volume trends for North American beverage can companies continue to be mostly negative, and we are concerned that there is too much excess capacity in the industry. The Fund position in Humana Inc. was trimmed amid industry reports of higher volumes of elective surgical procedures for older Americans. This has potential to lead to high medical costs and lower profitability.

RECENT DEVELOPMENTS

We continue to be vigilant as we see more downside risk to the economy. Our concerns stem from impact of the U.S. Federal Reserve Board's interest rate hikes as they work their way through the U.S. economy. Household finances are beginning to weaken, there has been volatility in commodities markets and China continues to have economic troubles despite targeted economic stimulus, which has not seen much success.

While the economy is overheated (high growth, high inflation), we do see pockets of opportunity in defensive parts of the markets, such as high-quality pharmaceuticals with durable organic growth. We believe these areas can grow in excess of the implied expectations of market participants.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2023 and March 31.
