## RESULTS OF OPERATIONS

The Fund's net assets decreased by \$60.4 million to \$513.1 million from March 31, 2023 to September 30, 2023. The Fund had net redemptions of \$15.8 million during the period. The portfolio's performance decreased assets by \$32.2 million. The Fund paid distributions totalling \$12.4 million. Series A units returned -6.1% after fees and expenses for the six-month period ended September 30, 2023. Over the same time period, the Fund's benchmark returned -8.0%. The benchmark is the MSCI World Core Infrastructure Net Return Index (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

Throughout the period, financial market conditions deteriorated due to expectations that inflation would not decline as quickly as first thought and that interest rates could remain high. This put pressure on valuations across a variety of sectors, with particular impact in the utilities and real estate sectors. Relatedly, major economies, particularly the United States, registered stronger growth than investors had expected earlier in the year. This, along with discipline among global oil producers, lifted the more economically sensitive sectors, such as industrials and energy, as well as the transportation industry.

The Fund outperformed its benchmark over the period. An overweight allocation to the energy sector and underweight allocations to the utilities and communication services sectors significantly contributed to the Fund's performance. Security selection within the energy, communication services and real estate sectors also contributed to the Fund's performance. Many of the Fund's top individual contributors to performance were U.S. midstream energy companies, including The Williams Cos. Inc., Targa Resources Corp. and Cheniere Energy Inc. The stocks of these companies benefited from improving energy prices and solid financial results. A holding in Brazilian utility Equatorial Energia SA was another notable contributor to the Fund's performance.

Security selection in the utilities sector detracted from the Fund's performance, as did selection within Germany and Canada. The Fund's holding in the U.S. cellular tower company SBA Communications Corp. detracted from performance amid interest rate movements and weakness in real estate investment trusts. Investors were also concerned that spending on lead cable remediation for SBA Communications Corp.'s key customers could inhibit the company's growth. A holding in Canadian renewable company Boralex Inc. was another detractor from the Fund's performance because of interest rate pressures and lower power prices in Europe.

We added new positions in Auckland International Airport Ltd., Getlink SE, CCR SA and APA Group to the Fund. Holdings in Equatorial Energia SA and Dominion Energy Inc. were eliminated from the Fund.

## RECENT DEVELOPMENTS

Infrastructure markets have, in general, trailed broader equity markets in 2023, which is in contrast to their aggregate outperformance of global stocks over the past 10 years. We view this as an opportunity for long-term investors to take or expand positions within the infrastructure sub-sector, as fundamentals remain healthy. While North American midstream energy companies have held up well, as have certain global transportation infrastructure assets, interest rate-sensitive securities, such as utilities and towers, saw significant declines in the third quarter of 2023. The Fund has outperformed, benefiting from an underweight allocation to the utilities sector, but we are now seeing value in this sector. As a result, we will likely increase the Fund's weight in utilities.

With long-term cash flows for transportation, energy, utilities and telecommunications infrastructure remaining strong and consistent, any reduction in interest rate volatility is expected to let infrastructure stocks record strong gains, as they consistently have done in the past.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2023 and March 31.
